

Quick Update (v1.17.1)

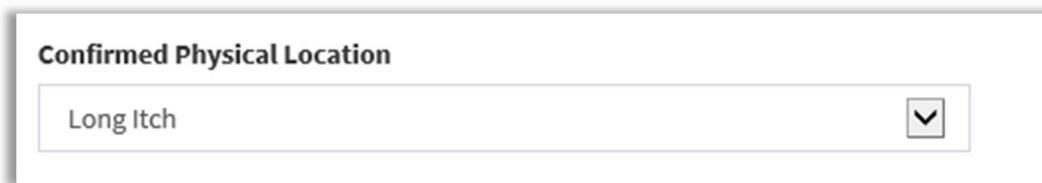

Additional Location Filter to PDI View

Ref: [GH_086]

The PDI Control module now includes an option to filter all records by Physical location of the vehicle. This caters for PDI teams to view only records that are applicable to them.

An administrator or manager will be required to select a physical location from the dropdown menu within Order management before progressing an order from *Awaiting Approval* to *Approved*. This is a mandatory field.

There will be an option in the user profile to set the preferred Physical location filter. This would affect the PDI Control view as above, without the user having to re-select the locations of choice.

How to: Click on **Deal Manager** in the Menu ribbon > select **PDI Control** > select the Physical Location(s) for record filtering.

Please Note: There may be features and changes within this document that your current permission level does not grant access to. Please discuss with your manager or the DQMS Support team if you need your permission levels raised.

If there is a feature you would like to see added to DQMSWeb, please do submit your request into support@kjltd.co.uk. On receipt, we will review your request and add to the roadmap.
